

# Rabbit anti SARS-CoV2(S) polyclonal antibody

Alternative Name(s): nan

#### **Order Information**

- Description: SARS-CoV2(S1)
- Catalogue: 630-920
- Lot: See label
- Size: 100ug/200ul
- Host: Rabbit
- Clone: nan
- Application: IHC(P)
- Reactivity: Hu, Ms, Rt,

## ANTIGEN PREPARATION

A synthetic peptide derived from C-term sequence of SARS-COV-2 Spike protein

### BACKGROUND

The SARS-CoV-2 virion contains four structural proteins: E (envelope), M (membrane), S (spike), and N (nucleocapsid) proteins. The N protein holds the RNA genome, and the S, E, and M proteins form the viral envelope. Coronavirus S protein is a large, multifunctional class I viral transmembrane protein. It is required for the entry of the virion particles into the cell through a contact with host cellular receptors. The S-protein of coronavirus consists of S1 and S2 functional units. S1 is responsible for host receptor binding, S2 is in charge of fusion.

#### PURIFICATION

The Rabbit IgG is purified by Epitope Affinity Purification

#### FORMULATION

This affinity purified antibody is supplied in sterile Phosphatebuffered saline (pH7.2) containing antibody stabilizer

#### SPECIFICITY

This antibody recognizes SARS-CoV2(S1) spike protein.

#### STORAGE

The antibodies are stable for 24 months from date of receipt when stored at -200C to -700C. The antibodies can be stored at 20C-80C for three month without detectable loss of activity. Avoid repeated freezing-thawing cycles.

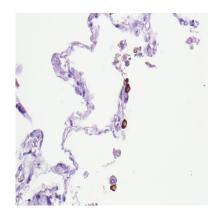

#### **APPLICATIONS/SUGGESTED WORKING DILUTIONS\***

- Western Blot: 0.1-1 µg/ml
- ELISA: 0.01-0.1 µg/ml
- Immunoprecipitation: 2-5 µg/ml
- IHC: 2-10 µg/ml
- Flow cytometry: Not tested
- Molecular Weight: 114.0
- Positive Control: Kidney Tissue
- Cellular Location: Cell Membrane

\*Optimal dilutions should be determined by researchers for the specific applications.

# FOR RESEARCH USE ONLY.

Immunohistochemistry: Human infected lung tissue (FFPE) stained with Rabbit anti-Sars-Cov2 (S protein)(Cat# 630-920) at 1:200 for 10 min @ RT. Staining of formalin-fixed tissue requires boiling tissue sections in 10 mM Citrate Buffer, pH 6.0 for 10 min followed by cooling at RT for 20 min. The infected pneumycytes positive.
