

# Rabbit anti CD3 Polyclonal Antibody

Alternative Name(s): CD3

#### **Order Information**

Description: CD3
Catalogue: 500-1254
Lot: See label
Size: 100ug/200ul
Host: Rabbit
Clone: nan

• Application: IHC(P), WB, FC • Reactivity: Hu, Mk, Dg

### **ANTIGEN PREPARATION**

A synthetic peptide corresponding to extracellular domain of human CD3.

#### **BACKGROUND**

CD3 is a glycoprotein consisting of up to five polypeptide chains (gp20, gp26, p16, p20, p28). CD3 is required for proper assembly, trafficking and surface expression of TCR complex. CD3 is expressed by thymocytes in a developmentally regulated manner and by all mature T cells. CD3 is involved in T cell activation, proliferation and apoptosis pathway. This protein is present on virtually all peripheral blood T cells and thymocytes. This anti-CD3 antibody is commonly used as a phenotypic marker for human T cells.

#### **PURIFICATION**

The Rabbit IgG is purified by Epitope Affinity Purification

#### **FORMULATION**

This affinity purified antibody is supplied in sterile Phosphatebuffered saline (pH7.2) containing antibody stabilizer

#### **SPECIFICITY**

This antibody recognizes CD3 protein. This antibody reacts with human, rat and mouse. The other species are not tested.

# STORAGE

The antibodies are stable for 24 months from date of receipt when stored at -20oC to -70oC. The antibodies can be stored at 2oC-8oC for three month without detectable loss of activity. Avoid repeated freezing-thawing cycles.

#### APPLICATIONS/SUGGESTED WORKING DILUTIONS\*

• Western Blot: 0.1-1 μg/ml

• ELISA: 0.01-0.1 μg/ml

• Immunoprecipitation: 2-5 µg/ml

• IHC: 2-10 µg/ml

• Flow cytometry: 0.5-5 µg/106 cells

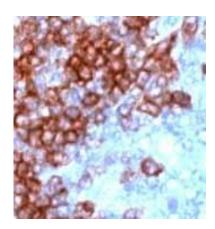

• Molecular Weight: 20.0

• Positive Control: Kidney Tissue

• Cellular Location: Cell Membrane

<sup>\*</sup>Optimal dilutions should be determined by researchers for the specific applications.

Immunohistochemistry: Human Tonsil (FFPE) stained with Rabbit anti-CD3 (Cat#500-1254) at 1:200 for 10 min @ RT. Staining of formalin-fixed tissue requires boiling tissue sections in 10 mM Citrate Buffer, pH 6.0 for 10 min followed by cooling at RT for 20 min.
